FACELESS CREATOR KIT

Quick-Start Guide

FACELESS SHORTS PERFORMANCE TRACKER

For reviewing performance after you post — not a posting calendar or script tool. Log each Short on YouTube Shorts, TikTok, Instagram Reels or Facebook Reels; every post is compared with the average of your other posts, and the Dashboard shows which hook types, niches, platforms and lengths work best for you.

File: `Faceless-Shorts-Performance-Tracker.xlsx` · 7 tabs · works in Excel 2016+ and Google Sheets · no macros. It opens with fictional sample data so you can see every formula working.

Set up in 4 steps

1. **Settings.** Enter your start date (a Monday), weekly goal (posts × platforms, e.g. 5 videos × 3 platforms = 15) and currency. Edit the Niches and Hook types lists to match your channel.
2. **Idea Bank.** Add ideas and score Curiosity, Ease and Evergreen from 1 to 5. A Score of 12 or more shows `Top pick` with a green circle.
3. **Video Log.** About 7 days after posting, add one row per video per platform: date, title, niche, hook type, platform, length, then views, % viewed, likes, comments, shares, follows and affiliate numbers from your analytics.
4. **Dashboard + Weekly Review.** Read the verdicts, the Best rows and the Top 5. Once a week, write Keep / Stop / Test notes in Weekly Review.

Colour key

Light yellow = you type. **Light grey = formula, leave it.** **Dark row = headers.**

Conditional formatting colours results: green = Winner / Top pick, red = Flop, orange = Not in Settings, lime = Best. Niche, Hook type, Platform, Status and the 1–5 scores are dropdowns.

Not included: hook library, script templates or script generator, posting calendar, automatic data import. You copy the numbers from your own analytics.

No outside benchmarks. Every verdict compares a post with your own posts. The RPM values in the sample are placeholders; use the RPM shown in your own analytics.

The 7 tabs

Tab	What it does	You type
Start Here	Steps, colour key, labels, how to clear the sample data, Google Sheets, more rows, optional dropdowns.	Nothing
Settings	Channel settings and the lists used by the Check columns and Dashboard (10 niches, 10 hook types, 4 platforms, 7 statuses, 5 length buckets). Room to row 34.	B5:B8 and list cells
Idea Bank	ID, Score = Curiosity + Ease + Evergreen, Top pick at 12+, Check column. Formulas in rows 5–64.	Idea, niche, hook, source, 3 scores, status, notes
Video Log	One row per video per platform. Length bucket, engagement rate, baseline, vs baseline, verdict, Check. Formulas in rows 5–64.	Columns A–O
Revenue Estimator	12 months from your start month. Ad revenue = views × RPM ÷ 1000 per platform. Affiliate revenue is summed from Video Log by month. Monthly and year totals.	Views, RPM, Sponsors / Other
Dashboard	6 KPIs, Top 5 videos, and 4 tables (By Hook type, Niche, Platform, Length bucket) with posts, avg 7-day views, avg % viewed, Winners, a Best marker and a text bar chart. Same video across platforms: latest 12 titles with views, verdict and best platform. Goal shown as "/ 15 goal".	Nothing (all formulas)
Weekly Review	12 week slots (weeks 5+ fill in after you copy rows down): week start, posts, 7-day views, Winners, best video, affiliate revenue.	Keep / Stop / Test

What the labels mean

Label	Meaning
Baseline	Average 7-day views of your OTHER posts on the same platform and length bucket (the post itself is left out). Shows `Need 3+` until at least 3 other posts exist.
● Winner / ○ Flop	Winner (green cell): views at least 1.5x your baseline. Flop (red cell): 0.5x or less (ratio rounded to 2 decimals, so 0.52x is Normal). Normal: in between. A dash means no baseline yet.
Top pick	Idea Bank score of 12 or more.
★ Best	Highest average 7-day views in a Dashboard table.
Not in Settings	Check column (warning sign in the file): a Niche, Hook type or Platform that is not spelled exactly as in your Settings lists, e.g. "Tiktok " with a space. Fix the spelling so your totals stay correct.

Clear the sample data

Select each range and press Delete. Clear the cells; do not delete rows.

- Idea Bank: `B5:H34` and `K5:L34` · Video Log: `A5:O40`
- Revenue Estimator: `B5:C6`, `E5:F6`, `H5:I6`, `K5:L6` and `O5:O6` (Sponsors / Other)
- Weekly Review: `H5:J6` (sample Keep / Stop / Test notes)
- Settings: change `B5:B8` to your own values; keep or edit the lists.

Use it in Google Sheets

Upload the .xlsx to Google Drive, open it, then choose File > Save as Google Sheets. All formulas and labels work the same.

Need more rows?

Pre-filled formula rows: 60 (rows 5–64) ≈ 4 weeks at 5 videos/week on 3 platforms. To log more, copy row 64 and paste down — about 10 seconds. Dropdowns, colours and all summaries already cover rows 5–1000.

> **Compatibility.** Uses only functions available in Excel 2016 and Google Sheets (no XLOOKUP, FILTER, LET or dynamic arrays). All formulas recalculated with zero errors in our formula checker.

OPTIONAL: POINT DROPDOWNS AT YOUR OWN LIST

Skip this unless you rename or add items in Settings — the dropdowns already work as shipped. They are fixed lists of the names shipped in Settings.

Excel: select the target range, then Data > Data Validation > Allow: List > Source: the source range > OK.
Google Sheets: select the target range, then Data > Data validation > Dropdown (from a range) > enter the source range > Done.

Column	Target range	Source range
Idea Bank Niche	`'Idea Bank'!C5:C1000`	`=Settings!$D$5:$D$34`
Idea Bank Hook type	`'Idea Bank'!D5:D1000`	`=Settings!$E$5:$E$34`
Idea Bank Status	`'Idea Bank'!K5:K1000`	`=Settings!$G$5:$G$34`
Video Log Niche	`'Video Log'!C5:C1000`	`=Settings!$D$5:$D$34`
Video Log Hook type	`'Video Log'!D5:D1000`	`=Settings!$E$5:$E$34`
Video Log Platform	`'Video Log'!E5:E1000`	`=Settings!$F$5:$F$34`

FAQ

Does it pull data from YouTube or TikTok automatically?

No. One row per post: 6 quick labels + 7 numbers from your analytics (2 optional affiliate fields).

Is a Winner a guarantee of anything?

No. It only means that post did at least 1.5x better than your own average for the same platform and length.

Are there charts? Can I add a real chart?

The Dashboard uses text bar charts (REPT), not native chart objects. To add one, select a Dashboard comparison table, then Insert > Chart (Excel or Google Sheets). The Dashboard is locked with no password: in Excel, first choose Review > Unprotect Sheet, or copy the table to a new tab.

I post on only one or two platforms. Does it still work?

Yes. Log only the platforms you use; empty platforms stay blank on the Dashboard.

Want a printable guide?

This PDF is the printable guide. Print it on US Letter or A4; both sizes are in the download.
