

ESL Bingo & Flashcard Generator

Works with no internet. Your words never leave your computer.

4 steps

- 1 Open the file**
Double-click **Bingo-Flashcard-Generator.html**. It opens in Chrome, Edge, Safari or Firefox. No install, no account.

- 2 Paste your words**
In **Word List**, paste one word per line: **cat = small pet** (also Tab, | or " - "). Meanings can be Chinese, Japanese or Korean. Or use **Load sample list** / **Import .txt**.

- 3 Choose Bingo or Flashcards**
Bingo: grid 3×3, 4×4 or 5×5, 1–60 cards, what goes on the card and on the calling cards, seed. **Flashcards**: front, back, 2/4/8/12 per page.

- 4 Choose paper and print**
Click **Letter** or **A4** at the top, then **Print / Save as PDF**. Choose your printer, or "Save as PDF" to keep a copy.

Double-sided flashcards

- In the Flashcards tab choose **Double-sided · long edge** (the default). Pages come out front, back, front, back.
 - In the print dialog turn on **Two-sided** and choose **Long edge** (sometimes called "Flip on long edge" or "Book").
 - Check the small tags: the back of card **A1** must say **A1**. If not, switch to **Double-sided · short edge** in the tool and choose **Short edge** in the dialog.
- No duplex printer? Choose **One-sided · fold**: front and back print side by side; cut, fold on the line and glue.

3 common questions

Safari prints no colours or backgrounds?

In Safari's print dialog, open the details and tick **Print backgrounds**. In Chrome/Edge open **More settings** and tick **Background graphics**. The cards are still clear in black & white.

Cards come out too small or cut off?

Set the scale to **100% / Actual size** (not "Fit to page"), and pick the same paper size in the dialog as in the tool (Letter or A4).

Moving to another computer?

Click **Save project .json**. It keeps your words, chosen pictures, your own images and settings. On the new computer click **Open project .json**.
