FACELESS CREATOR KIT

Animal Facts Shorts Script Vault

FOR FACELESS ANIMAL CHANNELS · SHORTS · REELS · TIKTOK

150 hooks · 60 timed scripts: 20× 30s · 20× 45s · 20× 60s

150
animal hooks · 10 types

60
timed scripts · 8 themes

Every script names a reference to verify it with, and a myth check where the popular version is wrong.

PDF · 80 pages · Letter + A4
hooks.csv · scripts.csv · script_beats.csv

Faceless Creator Kit

Contents

Every line is a link: click it to jump to that page. Hooks are numbered H001–H150, scripts S01–S60.

S60 Pandas Are Built Like Meat Eaters but Eat Bamboo Land mammals 77

How to use this vault

150 animal hooks and 60 finished scripts, each timed beat by beat: what to say, what to show, where to pause and how to sound. Seven steps from page to posted video:

1. **Pick a hook**
   Browse the hook library (pages 6–15): 10 hook types, 15 hooks each. Use one as an opener, a title idea or a cover line.

2. **Pick a script**
   Use the script index (page 16) to choose by length (30, 45 or 60 s), theme and species. Each script fits on one page.

3. **Check the "Verify with" line**
   Look the core fact up in the named reference before you record. Read the "Myth check" line so you don't repeat the popular wrong version.

4. **Swap the 3 "Make it yours" points**
   Each script lists 3 concrete swaps: a different opening, visual or question. Change at least one so the video is your own.

5. **Record the voiceover**
   Your own voice or any text-to-speech voice. Read the Voiceover column and pause where the Caption / pause column says.

6. **Add visuals per beat**
   The Visual column names one visual type per beat: a stock wildlife clip, a diagram, a scale graphic, a range map, a simple animation or your own pet footage.

7. **Post it**
   Copy the "Ready to post" box: title, one-line description, 3 hashtags, cover text, and the comment to pin.

The read-speed rule		`2.5 words / second = 150 wpm`
`30 s 55–75 words | 45 s 85–112 | 60 s 115–150 · 2.5 words/s`		
30 s scripts	5 beats	beat 1 = 0–3 s (the hook)
45 s scripts	6 beats	last beat = payoff + comment question
60 s scripts	8 beats	each beat: at most 2.5 × seconds + 2 words

Working in bulk?

The same text is in 3 CSV files: `hooks.csv`, `scripts.csv` (one row per script) and `script_beats.csv` (one row per beat). Import them into Google Sheets or Excel; see README.txt.

Accuracy & platform notes

Animal channels get corrected in the comments fast. Read this once before you post.

How the facts were chosen

- Every script is built on widely documented natural history about real, named species (common name + scientific name on each page).
- Speeds, sizes, ages and counts are given as “up to”, “about” or “around”, and only where widely published. Estimates are called estimates.
- Disputed claims were left out or flagged with “may”, “scientists think” or “one idea is”. No studies, researchers or quotes are invented.
- Our build process checked every script for internal consistency: species, numbers and wording match across the page, the CSVs and the hooks.

We are not zoologists or biologists

No outside expert reviewed these scripts. **Check each fact against the named reference before posting.** The “Verify with” line names where to look (an encyclopedia entry, a zoo, aquarium, museum or wildlife agency page); it is a pointer, not a guarantee.

If a viewer corrects you

Thank them, check the point in the named reference, and if they are right, pin a correction comment and fix the description.

Footage rights

Use stock footage you have a license for, your own footage, or public-domain and Creative Commons images with the attribution they require. Never use clips from TV documentaries or films.

AI voices and disclosure

Follow each platform’s current rules on AI-generated or synthetic content, and turn on its disclosure label whenever a rule applies.

What this vault does not promise

No script can promise views, followers, monetization or income. This vault saves research, writing and timing work; the channel is still yours to build.

01 OF 10

Superpower

Use when the animal does something no human body can. Name the ability in the first 3 seconds, then show it.

`This animal can [ABILITY]. You can't.`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H001	This salamander can regrow a lost leg. You can't.	Reptiles & amphibians	9
H002	A mantis shrimp punches faster than you can blink.	Ocean & deep sea	9
H003	Tardigrades can survive drying out for years. You'd last days.	Insects & tiny	10
H004	Pigeons can find their way home from places they've never been.	Birds	11
H005	A wood frog can spend winter partly frozen and hop away in spring.	Reptiles & amphibians	13
H006	Elephants may sense rumbles through their feet from kilometers away.	Land mammals	10
H007	Your dog's nose picks up smells you will never notice.	Pets & farm	10
H008	Hummingbirds can fly backwards. Try that with your arms.	Birds	9
H009	An electric eel can make enough electricity to stun its prey.	Extremes & records	11
H010	Cuttlefish change color in a blink, yet they're probably colorblind.	Ocean & deep sea	10
H011	A gecko can walk up a window with no glue at all.	Reptiles & amphibians	12
H012	Bats can find insects in total darkness using sound.	Land mammals	9
H013	Owls can turn their heads about 270 degrees. You manage around 90.	Birds	12
H014	A dung beetle can steer by the Milky Way at night.	Insects & tiny	11
H015	Some ants can carry many times their own body weight.	Insects & tiny	10

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

02 OF 10

Weird body

Lead with one body part or number that sounds wrong. The rest of the Short explains why the animal needs it.

`This [ANIMAL] has [ODD BODY PART OR COUNT].`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H016	An octopus has three hearts, and its blood is blue.	Ocean & deep sea	10
H017	A giraffe's neck has seven bones. So does yours.	Land mammals	9
H018	Starfish have no central brain and no blood.	Ocean & deep sea	8
H019	A snail's mouth can hold thousands of tiny teeth.	Insects & tiny	9
H020	Koalas have fingerprints that look a lot like ours.	Land mammals	9
H021	A cow has one stomach with four separate chambers.	Pets & farm	9
H022	That backward flamingo knee is really its ankle.	Birds	8
H023	Horses have some of the largest eyes of any land mammal.	Pets & farm	11
H024	A slug breathes through a hole on the side of its body.	Insects & tiny	12
H025	Sharks have no bones. Their skeleton is made of cartilage.	Ocean & deep sea	10
H026	Snakes smell the air by flicking their forked tongues.	Reptiles & amphibians	9
H027	A chameleon's eyes can look in two directions at once.	Reptiles & amphibians	10
H028	Cats have a third eyelid you rarely get to see.	Pets & farm	10
H029	T. rex arms were short, but fossils suggest they were heavily muscled.	Extinct & prehistoric	12
H030	A blue whale's tongue alone can weigh as much as an elephant.	Extremes & records	12

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

03 OF 10

Scale swap

Translate the animal's size or strength into human terms. Show a simple scale graphic while you say it.

`Scaled to your size, a [ANIMAL] could [FEAT].`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H031	Scaled up to your size, a flea's jump would clear a tall building.	Insects & tiny	13
H032	Scaled to your size, some ants could lift a small car.	Insects & tiny	11
H033	A newborn blue whale can weigh about as much as a pickup truck.	Extremes & records	13
H034	A red kangaroo can cover about 8 meters in one hop.	Land mammals	11
H035	If you had a chameleon's tongue, it could be up to twice your height.	Reptiles & amphibians	14
H036	A hummingbird's heart can beat over 1,000 times a minute. Yours: about 70.	Birds	13
H037	About a dozen tardigrades could line up along one grain of rice.	Insects & tiny	12
H038	An elephant's trunk can hold about 8 liters of water at once.	Land mammals	12
H039	A sperm whale's brain weighs about six times as much as yours.	Extremes & records	12
H040	Weight for weight, some spider silk is stronger than steel.	Insects & tiny	10
H041	Tarsier eyes, scaled to your face, would each be grapefruit-sized.	Land mammals	10
H042	An ostrich's eye is bigger than its brain.	Birds	8
H043	An emperor penguin can stand about as tall as a seven-year-old.	Birds	11
H044	Some of the largest dinosaurs were about as long as three buses.	Extinct & prehistoric	12
H045	A megalodon tooth could be about as long as your whole hand.	Extinct & prehistoric	12

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

04 OF 10

Survival trick

Open on the moment of danger, then reveal the defense. Keep it PG: show the trick, never an attack.

`When danger gets close, this [ANIMAL] [DEFENSE MOVE].`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H046	When a predator gets close, a pufferfish puffs up into a spiky ball.	Ocean & deep sea	13
H047	Threatened, a Virginia opossum may play dead for minutes at a time.	Land mammals	12
H048	A hognose snake rolls over and plays dead when it feels threatened.	Reptiles & amphibians	12
H049	Some lizards drop their tails to escape, then grow new ones.	Reptiles & amphibians	11
H050	A skunk stamps its feet as a warning before it sprays.	Land mammals	11
H051	Stick insects survive by looking exactly like twigs.	Insects & tiny	8
H052	Octopuses can squirt ink to cover their escape.	Ocean & deep sea	8
H053	A hedgehog rolls into a ball of spines when it’s scared.	Land mammals	11
H054	Killdeer parents fake a broken wing to lead danger away from the nest.	Birds	13
H055	Bombardier beetles spray a hot chemical mist to drive attackers off.	Insects & tiny	11
H056	Some caterpillars have fake eyes that make them look like snakes.	Insects & tiny	11
H057	A cat arches its back and puffs its fur to look bigger.	Pets & farm	12
H058	Sheep stay safer in a flock, where a predator struggles to pick one out.	Pets & farm	14
H059	Scientists still debate zebra stripes. One leading idea: fewer fly bites.	Land mammals	11
H060	Ankylosaurus carried a bony club on the end of its tail.	Extinct & prehistoric	11

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

05 OF 10

Guess the animal

A two-clue riddle. Hold the answer until beat 2 and ask viewers to type their guess before the reveal.

`Clue 1: [ODD TRAIT]. Clue 2: [WHERE IT LIVES]. Guess?`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H061	It sleeps holding hands and keeps a rock in a skin pocket. Guess?	Ocean & deep sea	13
H062	Clue one: it has no bones. Clue two: it tastes with its arms.	Ocean & deep sea	13
H063	It lays eggs, has a duck-like bill, and it's a mammal. Name it.	Land mammals	13
H064	It can't jump, and it's the largest land animal alive. Guess?	Land mammals	11
H065	It flies, but it's a mammal, and it hangs upside down to sleep.	Land mammals	13
H066	It's the largest living bird, and it lays the largest eggs.	Birds	11
H067	Its poop is cube-shaped. Its home is Australia. Who is it?	Land mammals	11
H068	Its tongue is dark and up to about half a meter long. Guess?	Land mammals	13
H069	It may have been North America's most common bird. Now it's extinct.	Extinct & prehistoric	12
H070	This beetle makes its own light and uses it to find a mate.	Insects & tiny	13
H071	It has rectangular pupils and can climb surprisingly steep cliffs. Guess?	Pets & farm	11
H072	Sand temperature decides whether it hatches male or female. Name it.	Reptiles & amphibians	11
H073	Clue one: it's pink. Clue two: it was born gray.	Birds	10
H074	It's a fish, it swims upright, and the dad gives birth.	Ocean & deep sea	11
H075	It was a giant shark, and it vanished millions of years ago. Name it.	Extinct & prehistoric	14

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

06 OF 10

Your pet secretly...

Explain a pet or farm-animal behavior viewers see every day. Facts only: no care, diet, training or vet advice.

`Your [PET] [HIDDEN BEHAVIOR OR ABILITY].`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H076	Your cat's slow blink may be a friendly signal.	Pets & farm	9
H077	When your dog tilts its head, it may be trying to hear you better.	Pets & farm	14
H078	Your cat sees better in dim light than you do.	Pets & farm	10
H079	Your dog's nose print is unique, like a fingerprint.	Pets & farm	9
H080	Your goldfish can learn to recognize feeding time.	Pets & farm	8
H081	Adult cats rarely meow at each other. The meowing is mostly for us.	Pets & farm	13
H082	Dogs go through sleep stages like ours, and they may dream.	Pets & farm	11
H083	Your rabbit's teeth never stop growing.	Pets & farm	6
H084	Your cat's whiskers help it judge whether it fits through a gap.	Pets & farm	12
H085	A hamster's cheek pouches can stretch all the way back to its shoulders.	Pets & farm	13
H086	Many pet parrots can learn dozens of words.	Pets & farm	8
H087	Your cat kneads with its paws, a habit from kittenhood.	Pets & farm	10
H088	A chicken can tell many of its flockmates apart by their faces.	Pets & farm	12
H089	Your dog's wagging tail doesn't always mean happy.	Pets & farm	8
H090	Pigs can learn to come when their name is called.	Pets & farm	10

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

07 OF 10

Hard life

A sympathetic angle: one daily struggle the animal faces, then how its body copes. Gentle, never gory.

`Why it's hard to be a [ANIMAL]: [DAILY STRUGGLE].`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H091	Why it's hard to be a sloth: digesting one leafy meal can take weeks.	Land mammals	14
H092	Why it's hard to be a mayfly: some adults live about a day.	Insects & tiny	13
H093	Why it's hard to be a panda: bamboo barely feeds you.	Land mammals	11
H094	Why it's hard to be a koala: eucalyptus leaves are low in energy.	Land mammals	13
H095	Why it's hard to be a hummingbird: you must eat almost constantly.	Birds	12
H096	Emperor penguin dads guard the egg for about two months without eating.	Birds	12
H097	Why it's hard to be a salmon: you swim upriver to where you hatched.	Ocean & deep sea	14
H098	Why it's hard to be a giraffe: drinking water means doing the splits.	Land mammals	13
H099	Why it's hard to be a cicada: years underground for a few weeks above.	Insects & tiny	14
H100	Why it's hard to be a sea turtle hatchling: the race to the sea.	Reptiles & amphibians	14
H101	Why it's hard to be a pig: you can barely sweat.	Pets & farm	11
H102	Why it was hard to be a woolly mammoth when the Ice Age ended.	Extinct & prehistoric	14
H103	Why it's hard to be a bee: a summer worker lives about six weeks.	Insects & tiny	14
H104	Why it's hard to be a deep-sea fish: food rarely reaches you.	Ocean & deep sea	12
H105	Why it's hard to be a frog: your skin has to stay damp.	Reptiles & amphibians	13

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

08 OF 10

Deep & extinct

Deep-sea and prehistoric facts sound made up. State it plainly, hedge the dates, show a diagram.

`[DEEP-SEA OR EXTINCT FACT THAT SOUNDS MADE UP].`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H106	In the deep sea, anglerfish dangle a glowing lure in total darkness.	Ocean & deep sea	12
H107	Woolly mammoths were still alive when the Great Pyramid was built.	Extinct & prehistoric	11
H108	Megalodon may have been about three times longer than a great white.	Extinct & prehistoric	12
H109	The dodo had never met humans, so it had no reason to run.	Extinct & prehistoric	13
H110	Many deep-sea animals make their own light. It's called bioluminescence.	Ocean & deep sea	10
H111	A giant squid's eye can be about the size of a dinner plate.	Ocean & deep sea	13
H112	Saber-toothed cats weren't tigers. They weren't even close relatives.	Extinct & prehistoric	9
H113	T. rex lived closer in time to you than to Stegosaurus.	Extinct & prehistoric	11
H114	Quetzalcoatlus had a wingspan about as wide as a small plane.	Extinct & prehistoric	11
H115	The vampire squid doesn't drink blood. It eats drifting marine snow.	Ocean & deep sea	11
H116	Trilobites roamed the seas for about 270 million years before vanishing.	Extinct & prehistoric	11
H117	The coelacanth was known from fossils, then a living one turned up in 1938.	Ocean & deep sea	14
H118	Steller's sea cow, up to about 8 meters long, was gone by 1768.	Extinct & prehistoric	13
H119	Below about 1,000 meters, the ocean is pitch dark all day long.	Ocean & deep sea	12
H120	Archaeopteryx had feathers, wings, and a mouth full of teeth.	Extinct & prehistoric	10

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

09 OF 10

Myth busted

Name the popular version first, then correct it in the next breath. Pair it with scripts that carry a Myth check note.

`You've heard [MYTH]. Here's the truth.`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H121	You've heard goldfish have three-second memories. Here's the truth.	Pets & farm	9
H122	You've heard bulls hate the color red. They're reacting to movement.	Pets & farm	11
H123	Ostriches don't bury their heads in sand. Here's what they're actually doing.	Birds	12
H124	Bats aren't blind. Many see well and also use sound.	Land mammals	10
H125	Harvestmen, the daddy longlegs, aren't spiders and have no venom.	Insects & tiny	10
H126	Chameleons don't change color to match the background. Here's why they do.	Reptiles & amphibians	12
H127	Lemmings don't leap off cliffs in mass suicide.	Land mammals	8
H128	Owls can't spin their heads all the way around.	Birds	9
H129	Camels don't store water in their humps. It's fat.	Land mammals	9
H130	Elephants don't drink through their trunks like straws.	Land mammals	8
H131	Dogs don't see only in black and white.	Pets & farm	8
H132	Pigs aren't dirty. Mud is how they stay cool.	Pets & farm	9
H133	Flamingos aren't born pink. Their color comes from food.	Birds	9
H134	Megalodon isn't hiding in the deep sea. It's been extinct for millions of years.	Extinct & prehistoric	14
H135	Porcupines can't shoot their quills. They only come loose on contact.	Land mammals	11

Tip • Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

10 OF 10

Record holder

Fastest, biggest, oldest, smallest. Use widely published figures only and always hedge them with “up to” or “about”.

`The [ANIMAL] is the [RECORD]: up to about [NUMBER].`

ID	HOOK (SAY IT IN 0–3 S)	THEME	WORDS
H136	A cheetah can sprint at up to about 100 kilometers per hour.	Extremes & records	12
H137	A peregrine falcon’s dive can top 300 kilometers per hour.	Extremes & records	10
H138	The blue whale is the largest animal known to have ever lived.	Extremes & records	12
H139	A Greenland shark may live for 270 years or more.	Extremes & records	10
H140	The bee hummingbird is the smallest bird alive, about 5 to 6 centimeters long.	Birds	14
H141	The Arctic tern’s yearly migration can cover around 70,000 kilometers.	Birds	10
H142	Bowhead whales may live more than 200 years.	Extremes & records	8
H143	The sailfish is often called the fastest fish in the sea.	Ocean & deep sea	11
H144	A giraffe is the tallest living animal, up to about 5.5 meters.	Land mammals	12
H145	The ostrich lays the largest egg of any living bird.	Birds	10
H146	The Komodo dragon is the largest living lizard.	Reptiles & amphibians	8
H147	A sperm whale has the largest brain of any known animal.	Extremes & records	11
H148	The African bush elephant is the largest land animal alive.	Land mammals	10
H149	The goliath frog is the world’s largest frog, at up to about 3 kilograms.	Reptiles & amphibians	14
H150	The Etruscan shrew may be the lightest mammal, at about 2 grams.	Extremes & records	12

Tip · Show the animal on screen within 1 s of saying it. Up to 9 words fit the 0–3 s hook beat; let a longer hook run into beat 2. Check the claim in a named general reference before posting.

Why Sea Otters Hold Hands While They Sleep

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Sea otters hold hands while they sleep.	Stock clip: two sea otters floating on their backs	▶ Big card: HOLD HANDS	Playful
3–9	Resting otters often link paws or wrap themselves in kelp, so the current doesn't pull them apart.	Stock clip: otter wrapped in kelp strands	Highlight "kelp"	Warm
9–16	A group floating together is called a raft, and some rafts hold dozens of otters.	Stock clip: large group of otters resting	▶ Big card: A RAFT	Curious
16–23	They often stash a rock in a loose pocket of skin under one arm.	Simple diagram: skin pocket under the arm	⏸ Pause after "rock"	Amazed
23–30 CTA	They use it to crack open shellfish. What animal fact should I cover next?	Stock clip: otter tapping a shell on its chest	Hold question 1.5 s	Warm

VERIFY WITH	Monterey Bay Aquarium: animal page "sea otter" · Encyclopaedia Britannica: "sea otter"
MYTH CHECK	No common myth.

Make it yours

3 swaps so it's your video

1. Open on the rock pocket instead, then reveal the hand-holding.
2. Use a map of the sea otter's Pacific range as the main visual.
3. Ask viewers which animal they think sleeps in the strangest way.

Ready to post

TITLE Why Sea Otters Hold Hands While They Sleep

DESCRIPTION Why sea otters link paws and carry a rock under one arm.

Honeybees Dance to Give Directions

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Honeybees give each other directions by dancing.	Stock clip: honeybees crowded on a honeycomb	▶ Big card: BEE DANCE	Playful
3–9	A forager that finds flowers comes home and runs a figure-eight pattern on the comb.	Simple animation: figure-eight path on a comb	Highlight “figure-eight”	Clear
9–16	In the straight middle run, she waggles her body. The angle of that run points toward the food.	Diagram: waggle run angle compared to the sun	⏸ Pause after “angle”	Curious
16–23	How long she waggles tells the other bees roughly how far away the flowers are.	Simple animation: longer waggle, longer distance line	▶ New card per idea	Explainer
23–30 CTA	It’s a map made of movement. Which insect should I explain next?	Stock clip: bees flying out to flowers	Hold question 1.5 s	Warm

VERIFY WITH	Encyclopaedia Britannica: “honeybee” and “waggle dance”
MYTH CHECK	No common myth.

Make it yours

3 swaps so it’s your video

1. Open with a question: how do bees share a map without words?
2. Draw the dance on paper with an arrow and a sun icon.
3. End by asking viewers to guess how far bees fly for food.

Ready to post

TITLE Honeybees Dance to Give Directions

DESCRIPTION How a honeybee’s waggle dance points other bees to flowers.

COVER TEXT Bees dance directions

PIN Which insect should I explain next?

Hummingbirds Can Fly Backwards. Here's How.

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Hummingbirds are the only birds that can fly backwards.	Stock clip: hummingbird hovering at a flower	▶ Big card: BACKWARDS	Punchy
3–9	Their shoulder joint lets the wings swivel, pushing air on both the up and down strokes.	Simple diagram: wing tracing a figure-eight	Highlight "swivel"	Clear
9–16	That figure-eight motion lets them hover in place, then slip backwards out of a flower.	Slow-motion stock clip of hovering wings	⏸ Pause after "hover"	Amazed
16–23	Flying like this burns a lot of energy, so they visit flowers again and again all day.	Stock clip: hummingbird moving flower to flower	▶ New card: ALL DAY	Explainer
23–30 CTA	A tiny bird with a jet-pack lifestyle. Which bird should I cover next?	Close-up of hummingbird, slow zoom out	Hold question 1.5 s	Warm

VERIFY WITH	Cornell Lab of Ornithology, All About Birds: "Ruby-throated Hummingbird" · Encyclopaedia Britannica: "hummingbird"
MYTH CHECK	No common myth.

Make it yours

3 swaps so it's your video

1. Open on the heart rate instead, then reveal the backward flight.
2. Use slow-motion stock footage of wings for the whole middle beat.
3. Ask viewers to name another bird with a surprising skill.

Ready to post

TITLE Hummingbirds Can Fly Backwards. Here's How.

DESCRIPTION How hummingbirds hover and fly backwards, and what it costs them.

HASHTAGS `#animalfacts #hummingbird #birds`

COVER TEXT It flies backwards

A Giraffe's Neck Has the Same Bones as Yours

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	A giraffe has as many neck bones as you.	Stock clip: giraffe stretching to a treetop	▶ Big card: SAME AS YOU	Punchy
3–9	That number is seven. Almost every mammal has seven, from mice to whales to people.	Simple graphic: seven vertebrae on three silhouettes	Highlight "seven"	Clear
9–16	The giraffe's trick is size. Each of its neck bones can be longer than your whole hand.	Scale comparison graphic: neck bone next to a hand	❚❚ Pause before "longer"	Amazed
16–23	Strong muscles and ligaments hold that heavy neck up, and help the giraffe swing it.	Stock clip: giraffe swinging its neck slowly	▶ New card per word	Explainer
23–30 CTA	Same bones, just stretched. Which animal body part should I explain next?	Giraffe silhouette at sunset, slow zoom	Hold question 1.5 s	Warm

VERIFY WITH	Smithsonian's National Zoo: animal page "giraffe" · Encyclopaedia Britannica: "giraffe"
MYTH CHECK	**Popular version:** A giraffe's long neck is packed with many extra bones. **Documented:** It has seven neck vertebrae, like most mammals; each bone is simply very long.

Make it yours

3 swaps so it's your video

1. Open with the myth: ask viewers to guess a giraffe's neck bone count.
2. Hold a ruler up to your own neck as the comparison visual.
3. End on another mammal with seven neck bones, such as a mouse.

Ready to post

TITLE A Giraffe's Neck Has the Same Bones as Yours

DESCRIPTION Giraffes and humans both have seven neck bones. Here's the difference.

HASHTAGS `#animalfacts #giraffe #wildlife`

COVER TEXT 7 neck bones. Same as you.

PIN Guess how long one giraffe neck bone is.

The Salamander That Can Regrow Its Legs

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	This smiling salamander can regrow a lost leg.	Stock clip: axolotl walking on an aquarium floor	▶ Big card: REGROWS	Punchy
3–9	The axolotl can rebuild a missing limb with bone, muscle and nerves, not just a scar.	Simple animation: leg outline filling back in	Highlight “not just a scar”	Amazed
9–16	It also keeps juvenile features as an adult, like the feathery gills on its head.	Close-up stock clip of axolotl gills	⏸ Pause after “gills”	Curious
16–23	In the wild, it lives only in the lake canals around Mexico City, and it is critically endangered.	Map of range: Mexico City canals	▶ New card: ENDANGERED	Serious
23–30 CTA	Scientists study it to understand healing. Which animal should I cover next?	Axolotl facing camera, slow push in	Hold question 1.5 s	Warm

VERIFY WITH	Encyclopaedia Britannica: “axolotl” · Smithsonian’s National Zoo: animal page “axolotl”
MYTH CHECK	No common myth.

Make it yours

3 swaps so it’s your video

1. Open on its permanent ‘baby’ features instead of regrowth.
2. Use a map of Mexico City’s lake canals for the habitat beat.
3. Ask viewers which body part they would most like to regrow.

Ready to post

TITLE The Salamander That Can Regrow Its Legs

DESCRIPTION Axolotls can regrow legs, and they stay young-looking for life.

HASHTAGS #animalfacts #axolotl #amphibians

The Goldfish Memory Myth, Explained

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Goldfish do not have a three-second memory.	Stock clip: goldfish swimming in a clear tank	▶ Big card: MYTH	Punchy
3–9	Goldfish can learn simple routines, like swimming to one corner when a light turns on.	Own pet footage: goldfish swimming to one corner	Highlight “learn”	Clear
9–16	They can learn to tell some colors and sounds apart, and remember them for weeks or longer.	Simple graphic: colored shapes with a fish icon	⏸ Pause after “longer”	Amazed
16–23	So if your goldfish rushes to the glass when you walk in, that may be memory at work.	Own pet footage: fish meeting a hand at the glass	▶ New card per clause	Warm
23–30 CTA	Three seconds was never true. Which pet myth should I check next?	Goldfish close-up, slow zoom out	Hold question 1.5 s	Friendly

VERIFY WITH Encyclopaedia Britannica: “goldfish” · Encyclopaedia Britannica: “fish learning and memory” topic pages

MYTH CHECK **Popular version:** Goldfish forget everything after about three seconds. **Documented:** Goldfish can learn routines, colors and sounds and remember them for weeks or longer.

Make it yours

3 swaps so it’s your video

1. Film your own goldfish swimming to its usual feeding corner.
2. Open with a quick quiz: how long is a goldfish’s memory?
3. End by asking viewers which pet myth they believed longest.

Ready to post

TITLE The Goldfish Memory Myth, Explained

DESCRIPTION Goldfish don’t have three-second memories. Here is what they remember.

HASHTAGS #animalfacts #goldfish #petfacts

COVER TEXT Not 3 seconds

PIN Which pet myth did you believe the longest?

Mammoths Were Alive When the Pyramids Rose

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Mammoths still lived when the pyramids were built.	Illustration: woolly mammoth in snow, public-domain art	▶ Big card: SAME TIME	Punchy
3–9	Most mammoths died out thousands of years earlier, as the last Ice Age ended.	Map of range: mammoth range shrinking	Highlight “Ice Age”	Clear
9–16	But a small group survived on Wrangel Island, off northern Siberia, until about 4,000 years ago.	Map of range: Wrangel Island highlighted	❚❚ Pause after “Wrangel Island”	Curious
16–23	The Great Pyramid of Giza was finished about 4,500 years ago, so the two overlapped.	Timeline graphic: pyramid and mammoth icons overlap	▶ New card per date	Amazed
23–30 CTA	History is closer than it looks. Which extinct animal should I cover next?	Mammoth silhouette fading on a timeline	Hold question 1.5 s	Warm

VERIFY WITH	Encyclopaedia Britannica: “mammoth” and “Wrangel Island” entries
MYTH CHECK	No common myth.

Make it yours

3 swaps so it’s your video

1. Open with a timeline quiz: pyramids or mammoths, which came first?
2. Use a map of Wrangel Island and Egypt side by side.
3. End by asking which extinct animal viewers wish still existed.

Ready to post

TITLE Mammoths Were Alive When the Pyramids Rose

DESCRIPTION The last woolly mammoths overlapped with the Great Pyramid of Giza.

HASHTAGS #animalfacts #mammoth #prehistoric

Tardigrades Are Tough, but Not Indestructible

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Tardigrades are tough, but they are not invincible.	Microscope-style animation: tardigrade walking on moss	▶ Big card: WATER BEAR	Punchy
3–9	These tiny animals, usually under one millimeter long, live in moss, soil and water almost everywhere.	Scale graphic: tardigrade beside a grain of sand	Highlight “under one millimeter”	Clear
9–16	When their home dries out, they curl into a dry, dormant ball called a tun.	Simple animation: tardigrade curling into a tun	❚❚ Pause after “tun”	Curious
16–23	In that state, some have survived extreme cold, heat and even exposure to space.	Simple graphic: snowflake, flame and planet icons	▶ New card per extreme	Amazed
23–30 CTA	Awake and active, they are far more fragile. Which tiny creature is next?	Tardigrade animation, slow zoom out	Hold question 1.5 s	Warm

VERIFY WITH Encyclopaedia Britannica: “tardigrade”

MYTH CHECK **Popular version:** Tardigrades are indestructible and can survive anything. **Documented:** They survive extremes mainly when dried out into a dormant state; active tardigrades can die like other animals.

Make it yours

3 swaps so it’s your video

1. Open with a microscope-style zoom from moss down to one tardigrade.
2. Replace the space beat with a frozen-pond example.
3. Ask viewers which tiny creature they want zoomed in next.

Ready to post

TITLE Tardigrades Are Tough, but Not Indestructible

DESCRIPTION Tardigrades survive drying out, but they are not indestructible.

HASHTAGS `#animalfacts #tardigrade #science`

COVER TEXT Tough, not immortal

PIN Which tiny creature should I zoom in on next?

No, Ostriches Don’t Bury Their Heads in Sand

BEAT TIMELINE (SECONDS)

0 3 9 16 23 30

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Ostriches don’t bury their heads in the sand.	Stock clip: ostrich standing tall on open plain	▶ Big card: MYTH	Punchy
3–9	They couldn’t breathe if they did. So where did the idea come from?	Stock clip: ostrich lowering its head	⏸ Pause after “did”	Curious
9–16	Ostriches nest in a shallow hole in the ground and lower their heads to turn their eggs.	Simple diagram: ground nest with eggs	Highlight “turn their eggs”	Clear
16–23	When hiding, they may also lie flat with their necks stretched along the ground.	Stock clip: ostrich lying low in grass	▶ New card: LYING LOW	Explainer
23–30 CTA	From far away, that looks like a buried head. Which myth should I bust next?	Wide shot of savanna, slow zoom out	Hold question 1.5 s	Warm

VERIFY WITH San Diego Zoo Wildlife Alliance: animal page “ostrich” · Encyclopaedia Britannica: “ostrich”

MYTH CHECK **Popular version:** Scared ostriches bury their heads in the sand. **Documented:** They lower their heads to turn eggs in a ground nest, or lie flat to hide; from far away it looks buried.

Make it yours

3 swaps so it’s your video

1. Open with the cartoon version, then cut to real footage.
2. Add the ostrich’s top running speed as a bonus fact.
3. Ask viewers where they first heard the head-in-sand myth.

Ready to post

TITLE No, Ostriches Don’t Bury Their Heads in Sand

DESCRIPTION Where the ostrich head-in-sand myth comes from, and what’s really happening.

HASHTAGS `#animalfacts #ostrich #mythbusting`

COVER TEXT Head in sand? No.

Poison Dart Frogs Get Their Poison From Food

BEAT TIMELINE (SECONDS)

0 3 10 18 27 36 45 54 60

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	This tiny frog gets its poison from its food.	Stock clip: golden poison frog on a leaf	▶ Big card: TOXIC	Punchy
3–10	The golden poison frog lives in a small patch of Colombian rainforest and is about 5 centimeters long.	Map of range: western Colombia	Highlight "5 centimeters"	Clear
10–18	Its skin carries one of the strongest natural toxins known. Its bright yellow color warns predators away.	Close-up stock clip of yellow skin	⏸ Pause after "warns"	Serious
18–27	Some Indigenous hunters in Colombia have used the toxin on the tips of blow-gun darts. That's where the name comes from.	Simple illustration: dart tip, no animals harmed	▶ New card: THE NAME	Explainer
27–36	But the frog doesn't make the poison from scratch. Scientists think it builds it from small insects it eats in the wild.	Simple graphic: ants and beetles into frog icon	Highlight "from insects"	Curious
36–45	Frogs raised in zoos on other food lack the toxin. Their diet doesn't contain the right ingredients.	Stock clip: frog in a zoo terrarium	⏸ Pause after "lack"	Amazed
45–54	So these are wild animals to watch, never to touch, wherever you meet them.	Stock clip: frog on rainforest floor	▶ New card: LOOK, DON'T TOUCH	Calm
54–60 CTA	You are what you eat, literally. Which colorful animal should I cover next?	Frog close-up, slow zoom	Hold question 1.5 s	Warm

VERIFY WITH Smithsonian's National Zoo: animal page "golden poison frog" · Encyclopaedia Britannica: "poison frog"

MYTH CHECK **Popular version:** Poison dart frogs are born toxic. **Documented:** Wild frogs build their toxin from insects they eat; frogs raised on other food lack it.

Make it yours

3 swaps so it's your video

1. Open on bright warning colors and ask: why so flashy?
2. Focus on the hunting-dart history instead of diet.
3. Ask viewers which colorful animal they want covered next.

Ready to post

TITLE Poison Dart Frogs Get Their Poison From Food

DESCRIPTION Where poison dart frogs get their toxins, and why zoo frogs don't.

HASHTAGS `#animalfacts #frogs #rainforest`

COVER TEXT Toxic from dinner

PIN Which colorful animal should I cover next?

Pigs Aren't Dirty. Mud Is Their Air Conditioner.

BEAT TIMELINE (SECONDS)

0 3 10 18 27 36 45 54 60

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Pigs aren't dirty. They just can't sweat much.	Stock clip: pig lying in a mud wallow	▶ Big card: NOT DIRTY	Playful
3–10	Pigs have very few working sweat glands, so they can't cool down the way we do.	Simple diagram: skin with few sweat glands	Highlight "very few"	Clear
10–18	On hot days, wet mud on the skin keeps cooling them as the water slowly evaporates.	Simple animation: heat lines rising off mud	⏸ Pause after "evaporates"	Explainer
18–27	A coat of mud also works as sunscreen and helps keep biting insects off their skin.	Stock clip: pig shaking off mud	▶ New card per benefit	Curious
27–36	Given room, pigs keep their sleeping area separate from their toilet area, often far apart.	Simple graphic: pen with two zones	Highlight "separate"	Amazed
36–45	They're also smart. Pigs can learn to come when called and can solve simple puzzles.	Stock clip: pig nudging an object with its snout	▶ New card: SMART	Warm
45–54	Their wild relative, the wild boar, wallows too, so it's an old habit, not a farm problem.	Stock clip: wild boar in a forest	⏸ Pause after "boar"	Calm
54–60 CTA	Mud is a tool, not a mess. Which farm animal should I defend next?	Pig close-up, slow zoom	Hold question 1.5 s	Warm

VERIFY WITH	Encyclopaedia Britannica: "pig" · Encyclopaedia Britannica: "wild boar"
MYTH CHECK	**Popular version:** Pigs roll in mud because they are dirty animals. **Documented:** Pigs have few working sweat glands; wallowing cools them down and protects their skin from sun and insects.

Make it yours

3 swaps so it's your video

1. Film pigs at a farm you have permission to film.
2. Open with a thermometer graphic over a sunny pen.
3. Ask viewers which farm animal reputation they think is unfair.

TITLE Dolphins Sleep With Half Their Brain Awake

DESCRIPTION How dolphins rest half their brain at a time, and whistle names.

HASHTAGS #animalfacts #dolphins #oceanlife

COVER TEXT Half asleep. Literally.

PIN Which animal sleep habit should I cover next?

Daddy Longlegs Aren't Spiders or Deadly

BEAT TIMELINE (SECONDS)

0 3 10 18 27 36 45 54 60

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	You've heard daddy longlegs are deadly. That's a myth.	Stock clip: harvestman walking on a wall	▶ Big card: MYTH	Punchy
3–10	The story says they're the most venomous spiders, but their fangs are too short to bite you.	Simple graphic: myth text with a cross	Highlight "too short"	Playful
10–18	Here's the truth. The animal many people call a daddy longlegs is a harvestman, and it isn't a spider.	Side-by-side drawing: harvestman vs spider	⏸ Pause after "harvestman"	Clear
18–27	Spiders have two main body parts. A harvestman's body looks like one round piece.	Simple diagram: two segments versus one oval	▶ New card: ONE BODY	Explainer
27–36	Harvestmen also have no silk glands, so they can't spin webs, and they have no venom glands.	Simple graphic: web and venom icons crossed out	Highlight "no venom"	Myth-buster
36–45	They eat small insects, dead plants and bits of rotting matter on the ground.	Stock clip: harvestman on leaf litter	▶ New card: CLEANUP CREW	Calm
45–54	They have eight legs, like spiders, and they often walk away and leave a leg behind if grabbed.	Stock clip: harvestman's long legs, close-up	⏸ Pause after "behind"	Curious
54–60 CTA	Not a spider, not deadly. Which bug myth did you hear at school?	Harvestman walking off, slow zoom	Hold question 1.5 s	Warm

VERIFY WITH Encyclopaedia Britannica: "harvestman" · Smithsonian National Museum of Natural History: arachnid pages

MYTH CHECK **Popular version:** Daddy longlegs are the most venomous spiders, but their fangs are too short to bite you. **Documented:** Harvestmen aren't spiders and have no venom glands at all.

Make it yours

3 swaps so it's your video

1. Open by repeating the playground myth word for word.
2. Use a side-by-side body diagram for the whole middle section.
3. Ask viewers which bug myth they heard at school.

Ready to post

TITLE Daddy Longlegs Aren't Spiders or Deadly

DESCRIPTION Harvestmen aren't spiders, aren't venomous, and that famous myth is wrong.

HASHTAGS `#animalfacts #bugs #mythbusting`

COVER TEXT Not deadly. Not spiders.

PIN Which bug myth did you hear at school?

Flamingos Are Born Gray. Food Turns Them Pink.

BEAT TIMELINE (SECONDS)

0 3 10 18 27 36 45 54 60

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Flamingos aren't born pink. Their chicks are gray.	Stock clip: fluffy gray flamingo chick	▶ Big card: BORN GRAY	Punchy
3–10	The pink comes from food. Flamingos eat algae and tiny shrimp-like animals full of natural pigments.	Close-up stock clip: flamingo feeding in water	Highlight "from food"	Clear
10–18	Those pigments are called carotenoids, the same family that colors carrots orange.	Simple graphic: carrot and shrimp icons	⏸ Pause after "carotenoids"	Explainer
18–27	Over time, the pigments build up in their feathers, skin and legs, turning them pink or orange-red.	Simple animation: gray feather turning pink	▶ New card: PINK BUILDS UP	Amazed
27–36	They feed with their heads upside down, filtering food from the water through comb-like edges in their beaks.	Simple diagram: upside-down beak with filter	Highlight "upside down"	Curious
36–45	American flamingos are among the brightest, with deep pinkish-orange feathers you can spot from far away.	Stock clip: flock of bright flamingos	▶ New card: BRIGHTEST	Warm
45–54	Parents even feed chicks a milk-like liquid from their throats in the first months of life.	Stock clip: adult feeding a chick	⏸ Pause after "throats"	Gentle
54–60 CTA	You really are what you eat. Which bird color should I explain next?	Flamingo flock, slow zoom out	Hold question 1.5 s	Warm

VERIFY WITH Encyclopaedia Britannica: "flamingo" · San Diego Zoo Wildlife Alliance: animal page "flamingo"

MYTH CHECK **Popular version:** Flamingos are born pink. **Documented:** Chicks hatch gray or white; pink comes from pigments in the algae and shrimp they eat.

Make it yours

3 swaps so it's your video

1. Open on a fluffy gray chick and ask viewers to guess the species.
2. Focus on the upside-down filter-feeding beak instead of color.
3. Ask viewers which bird color they want explained next.

Ready to post

TITLE Flamingos Are Born Gray. Food Turns Them Pink.

DESCRIPTION Why flamingos turn pink, and why their chicks start out gray.

HASHTAGS #animalfacts #flamingo #birds

COVER TEXT Born gray

Pandas Are Built Like Meat Eaters but Eat Bamboo

BEAT TIMELINE (SECONDS)

0 · 3 · 10 · 18 · 27 · 36 · 45 · 54 · 60

TIME (S)	VOICEOVER	VISUAL	CAPTION / PAUSE	TONE
0–3 HOOK	Pandas have a meat eater's gut but eat bamboo.	Stock clip: giant panda chewing bamboo	▶ Big card: PLOT TWIST	Playful
3–10	Giant pandas are bears, and their digestive system is short and simple, like a carnivore's.	Simple diagram: short gut compared with a cow's	Highlight "like a carnivore's"	Clear
10–18	But in the wild, bamboo makes up almost all of their diet, and they digest only a small part of it.	Simple graphic: bamboo pile with a small slice used	⏸ Pause after "small part"	Curious
18–27	So they eat a lot. A panda can spend many hours a day eating, often up to about half of each day.	Simple graphic: clock with eating hours shaded	▶ New card: HOURS OF EATING	Amazed
27–36	To grip stalks, they use an enlarged wrist bone that works like a thumb, often called a false thumb.	Simple diagram: paw with false thumb highlighted	Highlight "false thumb"	Explainer
36–45	Saving energy matters too. Pandas tend to move slowly and rest a lot between meals.	Stock clip: panda resting in a tree	▶ New card: SAVE ENERGY	Calm
45–54	Wild giant pandas live in mountain forests in central China, and their status has improved from endangered to vulnerable.	Map of range: mountains in central China	⏸ Pause after "vulnerable"	Hopeful
54–60 CTA	A bear on a salad diet. Which bear should I cover next?	Panda close-up, slow zoom	Hold question 1.5 s	Warm

VERIFY WITH	Smithsonian's National Zoo: animal page "giant panda" · Encyclopaedia Britannica: "giant panda"
MYTH CHECK	No common myth.

Make it yours

3 swaps so it's your video

1. Open with a quiz: carnivore or herbivore? Then reveal both answers.
2. Focus on the false thumb as the main visual.
3. Ask viewers which bear they want covered next.

TITLE Pandas Are Built Like Meat Eaters but Eat Bamboo

DESCRIPTION Why giant pandas eat bamboo with a meat eater's gut.

HASHTAGS `#animalfacts` `#panda` `#wildlife`

COVER TEXT Meat-eater gut. Bamboo diet.

PIN Which bear should I cover next?

Turn a script into a video in 6 steps

A generic workflow for any stock footage library, any text-to-speech tool or your own voice, and any video editor with captions.

1. **Personalize and check**
   Apply at least one “Make it yours” swap and look up the core fact in the “Verify with” reference. Read the script aloud once with a timer.

2. **Record the voiceover**
   Paste the Voiceover column into any text-to-speech tool, or record yourself at about 150 words per minute. Leave the pauses from the Caption / pause column.

3. **Gather visuals you have rights to**
   Licensed stock wildlife clips, your own footage, public-domain or Creative Commons images with attribution, and simple diagrams, maps and scale graphics made in any design tool.

4. **Cut beat by beat**
   Use the Time (s) column as your edit list: one cut or overlay change at each beat boundary. The beat timeline on each page shows where they fall.

5. **Add captions**
   Big captions, 1–3 words per card. Highlight the words named in the Caption / pause column and hold the final question on screen for about 1.5 s.

6. **Post and pin**
   Use the “Ready to post” box: title, description, hashtags and cover text. Turn on any disclosure the platform requires, and pin the suggested comment.

Batch tip: the CSV edit list

Open `script_beats.csv` in Google Sheets or Excel and filter by `script_id`. Each row is one beat with start and end seconds, voiceover, visual, caption and tone: an edit list to keep open next to your editor.

Make a series

Pair a script with a hook of the same theme for a follow-up video, or use the “Make it yours” swaps to film a new angle on the same species.

FAQ

Which themes are covered?

8 themes: Ocean & deep sea; Insects & tiny creatures; Birds; Land mammals; Reptiles & amphibians; Pets & farm animals; Extinct & prehistoric; Extremes & record breakers. Each has at least 7 scripts.

How many hooks are there?

150 hooks: 10 hook types × 15 hooks each (H001–H150). 8 of the 10 types are animal-only structures (Superpower to Deep & extinct); Myth busted and Record holder complete the set.

What is NOT covered?

- Pet care, training, diet or vet/medical advice
- Hunting, fishing or pest-control how-to
- Graphic predation or injury detail
- Animal cruelty or “fail” content
- Cryptids or paranormal claims presented as fact
- Fictional talking-animal stories
- Non-English text

Can I add my own hooks?

Yes. hooks.csv is a plain spreadsheet you can extend with your own rows. There is no generator.

Does it batch-generate a week of scripts?

No. It is a library of 60 finished scripts, not a generator or an app. 60 scripts = 2 months at 1 per day, or 3 weeks at 3 per day.

Does the same story come in 30, 45 and 60 s versions?

No. Each story is written at one length only: 20 stories at 30 s, 20 at 45 s and 20 at 60 s. The longest script is 60 s.

Are the facts guaranteed?

No. They come from widely documented natural history, but we are not zoologists or biologists and no outside expert reviewed them. Check each fact against the named “Verify with” reference before posting.

Can I use it on a monetized channel?

Yes, on your own channels. See the License page. You can’t resell or share the scripts as a script product.

License

Simple version: use the scripts in your own content as much as you like; don’t resell or share the pack.

You can

- Use any hook or script, as written or edited, in your own videos, Shorts, Reels, posts and captions.
- Use them for personal or commercial purposes, including your own monetized channels, on any number of your own channels.
- Edit, shorten, extend, translate or combine them, and read them with your own voice or any text-to-speech voice.
- Import the CSV files into your own tools, sheets and editing workflows, and add your own rows.

You can’t

- Resell, share, give away or upload this pack, the PDFs or the CSV files, in whole or in part.
- Publish the scripts or hooks as a script product: a script pack, template, prompt pack, course, e-book or any other text product.

Good to know

- One purchase covers one creator, or one channel team working on the same channels.
- Check each fact against the named reference before posting; you are responsible for what you publish.
- Faceless Creator Kit is an independent shop and is not affiliated with any video platform, zoo, aquarium, museum, agency or publisher named in this book.

Thank you for buying from Faceless Creator Kit.
